Mechanical engineering, and engineering discipline born of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series is a series of tutoring graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering education and research. We are fortunate to have a distinguished roster of series editors, each an expert in one of the areas of concentration. The names of the series editors are listed on page vi of this volume. The areas of concentration are applied mechanics, biomechanics, computational mechanics, dynamic systems and control, energetics, mechanics of materials, processing, thermal science, and tribology. Preface After 15 years since the publication of *Vibration of Structures and Machines* and three subsequent editions a deep reorganization and updating of the material was felt necessary. This new book on the subject of Vibration dynamics and control is organized in a larger number of shorter chapters, hoping that this can be helpful to the reader. New material has been added and many points have been updated. A larger number of examples and of exercises have been included.

This book addresses two primary deficiencies in the linear systems textbook market: a lack of development of state space methods from the basic principles and a lack of pedagogical focus. The book uses the geometric intuition provided by vector space analysis to develop in a very sequential manner all the essential topics in linear state system theory that a senior or beginning graduate student should know. It does this in an ordered, readable manner, with examples drawn from several areas of engineering. Because it derives state space methods from linear algebra and vector spaces and ties all the topics together with diverse applications, this book is suitable for students from any engineering discipline, not just those with control systems backgrounds and interests. It begins with the mathematical preliminaries of vectors and spaces, then emphasizes the geometric properties of linear operators. It is from this foundation that the studies of stability, controllability and observability, realizations, state feedback, observers, and Kalman filters are derived. There is a direct and simple path from one topic to the next. The book includes both discrete- and continuous-time systems, introducing them in parallel and emphasizing each in appropriate context. Time-varying systems are discussed from generality and completeness, but the emphasis is on time-invariant systems, and only in time-domain; there is no treatment of matrix fraction descriptions or polynomial matrices. Tips for using MATLAB are included in the form of margin notes, which are placed wherever topics with applicable MATLAB commands are introduced. These notes direct the reader to an appendix, where a MATLAB command reference explains command usage. However, an instructor or student who is not interested in MATLAB usage can easily skip these references without interrupting the flow of text.

Many writers and artists have undertaken the difficult task of recreating the image of Lenin for their contemporaries and future generations. The Blue Notebook by the well-known Soviet author Emmanuil Kazakevich (1913-1962) has become one of the most popular books about Lenin. A notebook in a blue cover actually did exist. In it Lenin jotted down notes for his famous book State and Revolution which he worked on in the difficult days preceding the Great October Socialist Revolution. At the time Lenin was in hiding at Razliv Station, from where he directed the preparations for the armed uprising. "He was a passionate traveler, a hunter, a crack shot, a top-notch driver, the life of the party, witty and full of fun... Moreover, he was a truly courageous soldier." This portrait of Kazakevich was drawn by his contemporary and colleague, the writer Alexander Tvardovsky. During the Second World War Kazakevich, commander of a platoon, was asked to join the staff of the brigade newspaper. After working on the paper for a short while he asked to be transferred back to the front lines. "The front lines are important to me not only as a patriot, but as a writer," he said. Emmanuil Kazakevich was born in the Ukraine in 1913, the son of a teacher. His first book, a volume of poetry, was published in 1932. He translated the works of Pushkin, Lermontov, and Mayakovsky into Yiddish. Kazakevich's first prose work, The Star, is a harsh, yet sensitive war story which gained him world fame. This was followed by Spring on the Oder, Heart of a Friend, Two in the Steppe, The House on the Square, By the Light of Day and The Blue Notebook, the author's last work. Kazakevich was twice awarded the State Prize for Literature.

The Floor Plan Manual Housing has for decades been a seminal work in the field of architecture. In its 5th, revised and expanded edition, approximately 160 international housing projects built after 1945 are documented and analyzed. The focus is on exemplary and transferrable projects, and on innovative and trendsetting concepts. The systematic representation of all projects allows the reader to compare and evaluate various floor plans – and to be inspired by the wealth of ideas and strategies for one's own design work. The introductory theoretical and historical essays have been newly written or updated, and offer a structured overview of the residential housing typology and its development.

Between Utopia and Dystopia offers a new interpretation of Erasmian humanism. It argues that Erasmian humanism created the identity of the universal and critical intellectual, but that this identity undermined the fundamental premises of humanist discourse. It closely reads several works of Erasmus and Thomas More, employing an interdisciplinary approach to the study of intellectual history, and adopting theoretical insights and methodological procedures from various disciplines.

Poetry & Strikes examines shifting representations of strike action in the work of six British poets from the 1970s to the present day. It considers how these poets have come to contend with, and contribute to, narratives surrounding industrial disputes.

Through these conversations, the book attempts to question the way in which union narratives and legacies are constructed, and to investigate the power dynamics that underpin the presentation of labour histories. The work of these poets helps us to understand how cultural memories have been formed, and makes it possible to see how these legacies may still be rewritten and reframed.

It is gratifying to note that the book has very widespread acceptance by faculty and students throughout the country. In the revised edition some new topics have been added. Additional solved examples have also been added. The data of transmission system in India has been updated.
