The present volume contains the proceedings of the Seventh International East-West Symposium of New Testament Scholars in Moscow 2016. Its contributions are devoted to different aspects of the question of the relation between history and theology in New Testament and extracanonical Gospel literature. They deal with problems regarding the impact of critical historical approaches for New Testament theology, the relation between the Gospels' claim for truth and historical facts, Orthodox receptions of the Gospel literature, and the presentation of "the" Gospel in Byzantine liturgy.

Why are independent courts rarely found in emerging democracies? This book moves beyond familiar obstacles, such as an inhospitable legal legacy and formal institutions that expose judges to political pressure. It proposes a strategic pressure theory, which claims that in emerging democracies, political competition eggs on rather than restrains power-hungry politicians. Incumbents who are losing their grip on power try to use the courts to hang on, which leads to the politicization of justice. The analysis uses four original datasets, containing 1,000 decisions by Russian and Ukrainian lower courts from 1998 to 2004. The

main finding is that justice is politicized in both countries, but in the more competitive regime (Ukraine) incumbents leaned more forcefully on the courts and obtained more favorable rulings.

Describes object-oriented techniques and shows how they can be used in the development of a reasonably larger program which is implemented in C++. Choosing the practical example of a computer-based drawing package, the author describes how the package is designed using an object-oriented approach and then written and implemented in C++. The program is written in Turbo C++ and therefore can be used on IBM PCs or compatibles. Assumes some knowledge of a high level language, such as C, Pascal, Modula-2 or Ada.

Introduction to Probability with Texas Hold'em Examples illustrates both standard and advanced probability topics using the popular poker game of Texas Hold'em, rather than the typical balls in urns. The author uses students' natural interest in poker to teach important concepts in probability.

A comprehensive and accessible survey of the best current accomplishments of GMO research in all their complexity and ramifications. The authors introduce the fundamentals of biotechnology as a scientific discipline, show how GMO research is conducted today, discuss the problems that have arisen from genetic technology and the tools needed to resolve them, and describes how GMO-derived technology may impact our lives in the future. On the technical side, the authors examine a wide range of current technologies employed for constructing GMOs, and describe approaches to novel research, appropriate protocols, and the process of constructing and screening a GMO. The discussion of plant and animal cells covers new strategies employed and the large-scale expression and purification of recombinant products in cultured cells. Social political, and legal issues are also discussed.

The concept of adiabatic electronic potential-energy surfaces, defined by the Born–Oppenheimer approximation, is fundamental to our thinking about chemical processes. Recent computational as well as experimental studies have produced ample evidence that the so-called conical intersections of electronic energy surfaces, predicted by von Neumann and Wigner in 1929, are the rule rather than the exception in polyatomic molecules. It is nowadays increasingly recognized that conical intersections play a key mechanistic role in chemical reaction dynamics. This volume provides an up-to-date overview of the multi-faceted research on the role of conical intersections in photochemistry and photobiology, including basic theoretical concepts, novel computational strategies as well as innovative experiments. The contents and discussions will be of value to advanced students and researchers in photochemistry, molecular spectroscopy and related areas.

Written for the moderately experienced Java programmer, this book builds on readers¿ existing knowledge of object-oriented programming and covers all important aspects of Standard C++—emphasizing more lower-level C-style details later in the presentation. Chapter topics include philosophy of C++, simplest C++, pointers and reference variables, object-based programming: classes, operator overloading, object-oriented programming: inheritance, templates, abnormal control flow, input and output, collections: the standard template library, primitive arrays and strings, C-style C++, and using Java and C++: the JNI. For new C++ programmers converted from Java.

Nanoscale science and computing is becoming a major research area as today's scientists try to understand the processes of natural and biomolecular computing. The field is concerned with the architectures and design of molecular self-assembly, nanostructures and molecular devices, and with understanding and exploiting the computational processes of biomolecules in nature. This book offers a unique and authoritative perspective on current research in nanoscale science, engineering and computing. Leading researchers cover the topics of DNA self-assembly in two-dimensional arrays and three-dimensional structures, molecular motors, DNA word design, molecular electronics, gene assembly, surface layer protein assembly, and membrane computing. The book is suitable for academic and industrial scientists and engineers working in nanoscale science, in particular researchers engaged with the idea of computing at a molecular level.

In the past four decades, there has been growing interest in the exciting new topic of physics in low dimensions. Thousands of original ideas have been proposed in the literature, and some are confirmed experimentally, along with several Nobel prizes which have been awarded in this field. While there are several books available, almost all are technical and accessible only to expert researchers. This book provides an accessible introduction to the field, with less emphasis on technical details. Whilst this book does not provide a traditional history of nano-science, instead it uses simple explanations and case studies as vehicles to explain key discoveries and the importance of them, enabling readers without a background in the area to gain an understanding of some aspects of nanoscale physics. It will be of interest to researchers working in condensed matter physics, in addition to engineers and advanced students in those disciplines. It also remains accessible to 'physics enthusiasts' from other academic disciplines, as technical details are contained within boxes and footnotes which can be skipped for a general reading of the book. Features: - Provides an accessible introduction to a technical subject - Contains exciting developments from the cutting-edge science being conducted in the area - Authored by a recognised expert in the field

This book provides an excellent introduction to the study of comparative criminology, and shows how comparative criminology can play an important role in understanding criminal behaviour -- and in improving criminal justice policies and practices.

This book presents a comparative constitutional analysis of the system of constitutional review in more than 150 countries. It describes different models of constitutional review and the bodies that hold this special and exclusive decision-making power on constitutional matters. It classifies the constitutional review bodies as special bodies responsible for protecting the constitutionality for which they hold a certain legal superiority in relation to other branches of power. Their review quite often covers legislative acts that are the highest legal instruments of a specific legal and political system. This gives the constitutional review body a special status with power to provide constitutional review under the system of the separation of powers, especially in relation to the legislative power that it may even annul statutes adopted by the legislative body. The book includes a French Summary, tables and map presenting Constitutional/Judicial Review around the world.
