

Chokes George E King Petroleum Engineering Oil

Journal of Petroleum Technology Official Monthly Publication of the Petroleum Branch, American Institute of Mining and Metallurgical Engineers Iowa State Gazetteer and Business Directory

Vols. 30-54 (1932-46) issued in 2 separately paged sections: General editorial section and a Transactions section.

Beginning in 1947, the Transactions section is continued as SAE quarterly transactions.

www.delphiclassics.com

Vols. for 1946-47 include as sect. 2 of a regular no., World oil atlas.

LIFE Magazine is the treasured photographic magazine that chronicled the 20th Century. It now lives on at LIFE.com, the largest, most amazing collection of professional photography on the internet. Users can browse, search and view photos of today's people and events.

They have free access to share, print and post images for personal use.

The Prize recounts the panoramic history of oil -- and the struggle for wealth power that has always surrounded oil. This struggle has shaken the world economy, dictated the outcome of wars, and transformed the destiny of men and nations. The Prize is as much a history of the twentieth century as of the oil industry itself. The canvas of this history is enormous -- from the drilling of the first well in Pennsylvania through two great world wars to the Iraqi invasion of Kuwait and Operation Desert Storm. The cast extends from wildcatters and rogues to oil tycoons, and from Winston Churchill and Ibn Saud to George Bush and Saddam Hussein. The definitive work on the subject of oil and a major contribution to understanding our century, The Prize is a book of extraordinary breadth, riveting excitement -- and great importance.

Vol. 1 (1880/81); v. 2 (1882/83); v. 3 (1884/85); v. 4 (1887/88); v. 5 (1889/90); v. 6 (1891/92); v. 7 (1892/93); v. 8 (1895/96); v. 9 (1897/98); v. 10 (1899/1900); v. 11 (1901/02); v. 12 (1903/04); v. 13 (1905/06); v. 14 (1908/09); v. 15 (1910/11); v. 16 (1912/13); v. 17 (1914/15); v. 18 (1916/17); v. 19 (1918/19); v. 20 (1922/23).

Nicholas George Malavis's well-reasoned and sophisticated study of the development of petroleum regulation offers historical and legal analysis of the basic issues affecting property rights and the public interest and traces the legal moves that shaped a new regulatory system centered around the Texas Railroad Commission. It provides a fascinating view of the multiple roles of lawyers in putting the new system in place as they worked for a variety of clients to resolve the serious conflicts plaguing the oil industry in its efforts to manage overproduction in the 1920s and 1930s. Access to the internal records of Vinson and Elkins has allowed Malavis to provide readers a rare view inside the world of lawyer-client relations. He describes how prominent attorney James Elkins and others applied their legal talents, negotiating skills, and political influence to fight for solutions to the problems that would help define the parameters of the new prorating system.

"Volume IV, Production operations engineering" provides readers with up-to-date information on design, equipment selection, and operation procedures for most oil and gas wells. Chapters cover three main topic areas: well completions, problems caused by formation damage, and artificial lift--a major concern for production engineers.

A brief introduction to a complex topic, giving a description of the processes involved in an accidental or emergency release and the resulting downwind transport and dilution of gases, vapors, and aerosols.

Explore the wonders of wild Mongolia through the eyes of a distinguished field biologist Mongolia became a satellite of the Soviet Union in the mid-1920s, and for nearly seven decades effectively closed its doors to the outside world. Biologist George Schaller initially visited the country in 1989, and was one of the first Western scientists allowed to study and assess the conservation status of Mongolia's many unique, native wildlife species. Schaller made a number of trips from 1989 to 2018 in collaboration with Mongolian and American scientists, witnessing Mongolia's recovery and transition to a market economy after the collapse of the Soviet Union. This informative and fascinating new book provides a firsthand account of Schaller's time in this little-known and remote country, where he studied and helped develop conservation initiatives for the snow leopard, Gobi bear, wild camel, and Mongolian gazelle, among other species. Featuring magnificent photographs from his travels, the book offers a critical, at times inspiring contribution for those who treasure wildlife, as well as a fresh perspective on the natural beauty of the region, which encompasses steppes, mountains, and the Gobi Desert.
