Introducing the book that bridges the gap between a dermatologic surgery textbook and a dedicated flap and reconstructive guide *Dermatologic Surgery* is a unique resource that offers the benefits of both a single-volume multi-author global dermatologic surgery textbook and a dedicated flap and reconstructive reference. Conveniently organized by flap type as well as regional approach, it offers by far the most comprehensive flap and reconstruction sections of any general dermatologic surgery book. The book's content breakdown attempts to reflect the proportion of time, effort, and training required for a given subject. For example, there are five full chapters (in addition to numerous other sections) dedicated to Mohs surgery. Similarly, a total of 17 richly illustrated chapters, including those devoted to particular flap techniques and regional approaches to reconstruction, address flap and graft closures. Since anatomy is the foundation on which all surgery is built, the anatomy chapter was built on a true ground-up cadaveric study of head and neck anatomy with an eye to clinical relevance. Full-length high-quality videos are an essential adjunct to learning procedural techniques, and this text includes the largest video resource of its kind ever compiled. This coupled with almost 3,000 high-quality clinical photographs and nearly 500 professional medical illustrations, including

infographics with surgical pearls for each chapter – many bolstered by beginner tips, expert tips, cautions, patient education points, and even billing tips – make this a true primer for real-world skin surgery practice.
