Poe Yu-ze Wan argues for a critical realist and systemist social ontology, designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research, and the nature of 'the social'. It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists, to challenge the commonly held view that the systems-based approach is holistic in nature and necessarily downplays the role of human agency.

The Cambridge History of Renaissance Philosophy offers a balanced and comprehensive account of philosophical thought from the middle of the fourteenth century to the emergence of modern philosophy at the turn of the seventeenth century. The Renaissance has attracted intense scholarly attention for over a century, but in the beginning the philosophy of the period was relatively neglected and this is the first volume in English to synthesize for a wider readership the substantial and sophisticated research now available. The volume is organized by branch of philosophy rather than by individual philosopher or by school. The intention has been to present the internal development of different aspects of the subject in their own terms and within their historical context. This structure also emphasizes naturally the broader connotations of "philosophy" in that intellectual world.

Computers are a fundamentally important tool in sport science research, sports

performance analysis and, increasingly, in coaching and education programmes in sport. This book defines the field of 'sport informatics', explaining how computer science can be used to solve sport-related problems, in both research and applied aspects. Beginning with a clear explanation of the functional principles of hardware and software, the book examines the key functional areas in which computer science is employed in sport, including: knowledge discovery and database development data acquisition, including devices for measuring performance data motion tracking and analysis systems modelling and simulation match analysis systems e-learning and multimedia in sports education Bridging the gap between theory and practice, this book is important reading for any student, researcher or practitioner working in sport science, sport performance analysis, research methods in sport, applied computer science or informatics. Das Buch gibt eine gut verständliche Einführung in die Grundlagen systemischer Therapie und Beratung. Systemisches Arbeiten wird in diesem Buch als ein Schaffen von Bedingungen für Selbstorganisationsprozesse verstanden, wie sie in psychischen, interpersonellen und biologischen Systemen ablaufen. Da solche Systeme aufgrund ihrer Nichtlinearität und Komplexität zu spontaner Musterbildung und zu chaotischen Dynamiken fähig sind, läuft diese Dynamik in manchen Fällen in unerwünschte oder „pathologische“ Zustände hinein.

Therapie besteht dann darin, die Selbstorganisationsfähigkeit der Systeme zu nutzen, um Musterwandel, Ordnungsübergänge und Lernprozesse anzuregen. Wie mit der Dynamik solcher Ordnungsübergänge im klinischen Alltag gearbeitet werden kann, wird anhand eines ausführlichen Fallbeispiels illustriert. Neben einem prozessadäquaten Einsatz von Therapietechniken kommt es dabei auf die Modellierung und Beschreibung der Systeme und Muster an, deren Entwicklung in der Therapie gefördert werden soll. Zur Erfassung der dynamischen Prozesse werden in der systemischen Praxis internetbasierte Monitoring-Verfahren genutzt, die ebenfalls praxisorientiert vorgestellt werden. Ausgehend von der Synergetik als Theorie selbstorganisierender Systeme stellt der Band eine neue Konzeption für eine schulenübergreifende, integrative systemische Therapie und Beratung vor.

The present volume deals with the most fascinating aspects of sensory performance studied in insects, crustaceans and spiders. Arthropods inhabit practically every conceivable ecological niche, and are perfectly adapted to cope with the constraints of their natural habitats. They move on the ground, in water, and in the air. They use visual, olfactory, acoustical, vibratory, and tactile cues for orientation, to recognize and pinpoint their target, their home place, a feeding site, a prey, or a potential mate. Many arthropods use celestial (skylight) and

terrestrial (magnetic) compass cues for orientation, and some of them were shown to develop, through experience, oriented behaviours based on a variety of innate, hard-wired orientation mechanisms. In many cases, aspects of behaviour that are involved in orientation cannot be separated from inter- and intraspecific communication. The book brings to the fore the role of communication not only in social and sexual behaviours, but also in the context of oriented locomotion. Top, internationally renowned scientists have contributed to this volume and have succeeded in presenting a book full of highlights which will be of great interest to workers in this field of research. With contributions by F. G. Barth; D. von Helverson, K.-E. Kaissling, W. Kirchner, M. Walker, M. Weissburg, R. Campan, T. Collett, J. Zeil, K. Kirschfeld, R. Wehner, M. Srinivasan, M. Lehrer, R. Meeting the need for a textbook for classroom use after first year Hebrew grammar, Waltke and O'Connor integrate the results of modern linguistic study of Hebrew and years of experience teaching the subject in this book. In addition to functioning as a teaching grammar, this work will also be widely used for reference and self-guided instruction in Hebrew beyond the first formal year. Extensive discussion and explanation of grammatical points help to sort out points blurred in introductory books. More than 3,500 Biblical Hebrew examples illustrate the points of grammar under

discussion. Four indexes (Scripture, Authorities cited, Hebrew words, and Topics) provide ready access to the vast array of information found in the 40 chapters. Destined to become a classic work, this long-awaited book fills a major gap among modern publications on Biblical Hebrew.

Naval Strategy and Operations in Narrow Seas
Routledge

Many books and articles have been written on wars in narrow seas. However, none deals in any comprehensive manner with the problems of strategy and conduct of naval operations. The aim of this book is to explain in some detail the characteristics of a war fought in narrow seas and to compare and contrast strategy and major operations in narrow seas and naval warfare in the open ocean..

This volume explores three trials conducted in Athens in the fourth century BCE; the defendants were all women charged with undertaking ritual activities, but much of the evidence remains a mystery. The author reveals how these trials provide a vivid glimpse of the socio-political environment of Athens during this time.

These papers deal with the concept of negotiation. Interlocutors engage in negotiations about every aspect of their interaction such as topics, social relationships, emotion and identity, and they use different means such as irony, silence and concessive constructions.

As of 17 December 2010, the Rome I Regulation (EU Regulation 593/2008) on the law

applicable to contractual obligations is directly applicable in all EU Member States with the exception of Denmark. The Rome I Regulation replaces the Rome Convention of 1980 in the EU Member States and will apply to all contracts concluded as of 17 December 2010. However, and herein lies the utility and great importance of this work, the Rome Convention and the Rome I Regulation will be applied in parallel for a significant time to come (the author himself anticipates a ten-to-fifteen year period); in the latter case to contracts made after 17 December, 2010. This is why this commentary takes into account both sources of law, in their mutual interaction and broader context. The comprehensiveness of the Rome Convention / Rome I Regulation is clearly apparent, but one of the great achievements of the author is his amassing of over 1,800 judicial decisions, most of which are furnished with a detailed commentary; where these decisions apply national laws, the latter are cited both in the original and in translation. For a number of rulings, the commentary include not only a case summary of the facts and an analysis of the conclusions drawn by the court, but also takes them as models to hypothesize what conclusions would be reached if the Rome I Regulation were to be applied.

Within the last years blockchain has become more in focus of the commodity trading sector because of its reputed potential. The characteristics of blockchain can be used to make it to an infrastructure technology. The trend toward the use of blockchain therefore furthers the optimization of the entire value chain and reduction of the friction

costs within the trading process. To reduce friction costs and to make use of the characteristics of blockchain, the technology is being introduced as a radical innovation into the commodity trading value chain. The focus of this thesis is on the resulting effects on the value chain after implementation. The research is conducted in a qualitative way, with an inductive research approach. Data is collected in order to build the theory, and interviews are conducted using the Gioia methodology for data analysis. The findings indicate that the value chain as a source of competitive advantage is affected in an overall positive way for firms. Competitive advantage is supported by value-adding effects and cost reduction, which are both enhanced through the use of blockchain. In addition, the results indicate that the competitive advantage of a company is also supported through power. The power that results from independence and control of data and information is enhanced by blockchain. It is therefore possible to conclude that the value chain of a company is positively affected by the radical innovation of blockchain. This leads to a greater competitive advantage for the company and positive performance in a competitive environment.

Called by Karl Barth the brilliant Ethics of Dietrich Bonhoeffer, this book is finally being recognized as Bonhoeffer's magnum opus and one of the most important works of Christian ethics of the last century. Presented here in a new translation and a striking new arrangement, it is based on intensive study of the original manuscripts and includes copious historical notes and commentary. Written in the midst of the

conspiracy to overthrow the Hitler regime, it is nonetheless chiefly concerned with ethics for the postwar time of reconstruction and peace. Focused on Christ, the God who became human, and the vision of a world reconciled with God, the Ethics shuns abstraction, seeks the will of God in concrete historical reality, and calls the church to be a transforming community in the world with a new responsibility in public life. This volume brings together papers relating to the pronunciation of Semitic languages and the representation of their pronunciation in written form. The papers focus on sources representative of a period that stretches from late antiquity until the Middle Ages. A large proportion of them concern reading traditions of Biblical Hebrew, especially the vocalisation notation systems used to represent them. Also discussed are orthography and the written representation of prosody. Beyond Biblical Hebrew, there are studies concerning Punic, Biblical Aramaic, Syriac, and Arabic, as well as post-biblical traditions of Hebrew such as piyyu? and medieval Hebrew poetry. There were many parallels and interactions between these various language traditions and the volume demonstrates that important insights can be gained from such a wide range of perspectives across different historical periods.
