Njáls saga is the best known and most highly regarded of all medieval Icelandic sagas and it occupies a special place in Icelandic cultural history. The manuscript tradition is exceptionally rich and extensive. The oldest extant manuscripts date to only a couple of decades after the saga's composition in the late 13th century and the saga was subsequently copied by hand continuously up until the 20th century, even alongside the circulation of printed text editions in latter centuries. The manuscript corpus as a whole has great socio-historical value, showcasing the myriad ways in which generations of Icelanders interpreted the saga and took an active part in its transmission; the manuscripts are also valuable sources for evidence of linguistic change and other phenomena. The essays in this volume present new research and a range of interdisciplinary perspectives on the Njáls saga manuscripts. Many of the authors took part in the international research project "The Variance of Njáls saga" which was funded by the Icelandic Research Council from 2011-2013.

This new edition of Systematic Theology by Wayne Grudem may be the most important resource you can own for helping you understand Scripture and grow as a Christian. The most widely used resource of the last 25 years in its area, Systematic Theology by Wayne Grudem has been thoroughly revised and expanded (all 57 chapters) for the first time while retaining the features that have made it the standard in its field: clear explanations, an emphasis on each doctrine's scriptural basis, and practical applications to daily life. Praise for the second edition: "After a quarter century of remarkable usefulness globally . . . it remains remarkable. I thank God for this precious gift to Christ's people worldwide." - John Piper "Stands out for its clarity and accessibility." - Thomas R. Schreiner "One of those rare works that can challenge the scholar and instruct the beginner . . . It is simply indispensable." - Jack Deere

With nearly 200 pages of new content and revisions that took several years, this new edition now includes the following distinctive features, making it even better: Updated, fuller analysis of several recent controversies within evangelicalism, including the eternal relationship between the Father and the Son in the Trinity, the question of God's atemporal eternity, the role of women in the church, "seeker-sensitive" churches, miraculous gifts of the Holy Spirit, and contemporary worship music. New, thoughtful critiques of open theism, the "new perspective on Paul," Molinism (or "middle knowledge"), "Free Grace" theology, and the preterist view of Christ's second coming

Completely revised, stronger chapter on the clarity of Scripture

Completely revised, stronger chapter on creation and evolution, including a longer critique of theistic evolution and an extensive discussion on the age of the earth

New discussion of how biblical inerrancy applies to some specific "problem verses" in the Gospels

Additional material respectfully explaining evangelical Protestant differences with Roman Catholicism (with extensive interaction with the Catechism of the Roman Catholic Church), Protestant liberalism, and Mormonism

Completely updated bibliographies

All Scripture quotations updated from RSV to ESV

An explanation of why monogenes in John 3:16 and elsewhere should be translated as "only begotten" rather than merely "only" (this is a change from the first edition)

A contemporary worship song added at the end of each chapter (while retaining the traditional hymns as well)

New discussion on the impassibility of God

An extensive discussion on the eternal submission of the Son to the Father, taking into account controversies in recent years

Updated section on contemporary worship music

A discussion of recent criticisms of the penal substitutionary view of the atonement

Numerous other updates and corrections that have been prompted by letters and emails from people around the world and by interaction with the students Wayne has taught over the last 26 years both at Trinity Evangelical Divinity School and at Phoenix Seminary

Part of the brilliance of Systematic Theology over the years has been its simplicity and ease of use. Each chapter follows the same structure. First, there is discussion of the doctrine being considered, such as justification or the Trinity or the deity of Christ. An explanation of that doctrine's biblical support and possible objections follow. Personal application and key terms to know for personal growth are then provided. Chapters also include a Scripture memory passage, references to other literature on the topic, and suggested hymns and worship songs. If you are someone who thinks theology is hard to understand or boring, then this new edition of Systematic Theology will likely change your mind.

Industrial electronics systems govern so many different functions that vary in complexity—from the operation of relatively simple applications, such as electric motors, to that of more complicated machines and systems, including robots and entire fabrication processes. The Industrial Electronics Handbook, Second Edition combines traditional and newer, more specialized knowledge that will help industrial electronics engineers develop practical solutions for the design and implementation of modern industrial systems. Embracing the broad technological scope of the field, this collection explores fundamental areas, including analog and digital circuits, electronics, electromagnetic machines, and signal processing. It also facilitates the use of intelligent systems—such as neural networks, fuzzy systems, and evolutionary methods—in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components. Assembling the world's leading researchers to cover key aspects of this branch of science, the handbook includes the following volumes, which are available individually or as a complete set:

Fundamentals of Industrial Electronics Power Electronics and Motor Drives Control and Mechatronics Industrial Communication Systems Intelligent Systems To help readers deal with myriad physical phenomena—and the sensors used to measure them—the handbook re-evaluates the importance of electronic circuits. It goes beyond their value as an end product and focuses on their importance as building blocks in larger systems. Taking into account the relative complexity of most fabrication processes, contributors simplify the development and application of communication systems that can be tailored for specific industrial environments to link the various elements of each. Enhancing its value, this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal, one of the largest and most respected publications in the field.

This collection of new essays re-examines and evaluates central themes in the work of Ralph Miliband, a leading contributor to Marxist political theory in twentieth century. It provides an essential reference point for research within the Marxist tradition, and a valuable resource for students on a range of courses in political and social theory.

this study, an analysis of poetry in Tina Sambal, a Philippine language spoken by about 70,000 persons in northern Zambales province, looks at the characteristics of the different poetic genres and poetic conventions followed in writing songs and poems. Primary emphasis is on phonological restrictions, grammatical liberties, and semantic embellishments. The first chapter describes Tina Sambal poetic genres and their use, focusing on the changing use of songs and poems, 11 specific song types (religious poetry, hortatory songs, life-story songs, entertaining songs, comical songs, compositions for special occasions, poems, serenading and caroling songs, courting songs, love letters, and sad love songs), functions of Tina Sambal songs and poems, traditional singing customs, and comparison with other Philippine languages. The second chapter examines the Tina Sambal poetic conventions, and the third chapter offers a brief conclusion. A separate section--and the longest in the book--consists of a "Chrestomathy" containing typical Tina Sambal poems and songs and an excerpt from one Tina Sambal Passion, each with an introduction and free translation, grouped according to genre. Appended materials include notes on typical features of Tina Sambal orthography and grammar; terms relating to poetry and song; esoteric words used; an index of authors, singers, and contributors; transcriptions of song melodies; and a list of available recorded songs. A glossary of technical terms and a list of references are also included. (MSE)

In 1921, Anton Baumstark delivered two lectures on the development of the Roman Rite to a gathering at the Abbey of Maria Laach. Abbot Ildefons Herwegen offered to publish those lectures, but Baumstark decided to write a book on the topic instead, which was published two years later as *On the Historical Development of the Liturgy*. It would be another sixteen years before he produced *Comparative Liturgy*, for which he is better known. Together the two books lay out Baumstark's liturgical methodology. *Comparative Liturgy* presents his method; *On the Historical Development of the Liturgy* offers his model. For nearly a century *On the Historical Development of the Liturgy* has been valued by specialists in the field of liturgical studies, both for its description of comparative liturgy and for the portrayal of patterns Baumstark discerns in liturgical development. Also significant are the hypotheses Baumstark proposes and the evidence he brings to bear on problems in liturgical history. In this annotated edition, Fritz West provides the first English translation of this work by Anton Baumstark. Trained in classical and oriental philology, Anton Baumstark (1872--1948) was prodigious as a scholar studying the literature, art, and liturgy of the whole church---Oriental, Eastern, and Western. *Comparative liturgy*, his method for studying the historical development of the liturgy as an organism, has had a lasting influence, notably on the liturgical study of the Christian East.

This handbook provides a comprehensive overview of feminist approaches to questions of violence, justice, and peace. The

volume argues that critical feminist thinking is necessary to analyse core peace and conflict issues and is fundamental to thinking about solutions to global problems and promoting peaceful conflict transformation. Contributions to the volume consider questions at the intersection of feminism, gender, peace, justice, and violence through interdisciplinary perspectives. The handbook engages with multiple feminisms, diverse policy concerns, and works with diverse theoretical and methodological contributions. The volume covers the gendered nature of five major themes: • Methodologies and genealogies (including theories, concepts, histories, methodologies) • Politics, power, and violence (including the ways in which violence is created, maintained, and reproduced, and the gendered dynamics of its instantiations) • Institutional and societal interventions to promote peace (including those by national, regional, and international organisations, and civil society or informal groups/bodies) • Bodies, sexualities, and health (including sexual health, biopolitics, sexual orientation) • Global inequalities (including climate change, aid, global political economy). This handbook will be of great interest to students of peace and conflict studies, security studies, feminist studies, gender studies, international relations, and politics.

Characterisation of the shallow subsurface has gained in importance as civil and geotechnical engineering and environmental applications have become more dependent on a precise definition of geomechanical and geohydrological properties. A better understanding of the subsurface conditions offers wide-ranging benefits to governments, industry and individual citizens. Subsurface geological modelling became an economic and technologic reality in the late 1980's, when competing 3-D geoscientific information systems were the subject of considerable research and evaluation, especially by the petroleum exploration industry. Investigations in the shallow subsurface impose additional requirements that have only recently become technically and economically achievable. The very shallow urban underground environment, where many infrastructure and utilities elements are located, presents the most difficult characterisation problems. Subsurface modelling techniques have matured, along with modern data base concepts. The evolution of the Internet and Web-browser technologies has expanded information transmission and dissemination capabilities. Subsurface models are being integrated with decision-support systems to provide predictions of technical and economic performance. Yet even

the most sophisticated of these models leave some uncertainty in geologic interpretation. A variety of techniques for assessing uncertainty have been developed and are being evaluated.

Appropriate for the traditional 3-term college calculus course, *Calculus: Early Transcendentals*, Fourth Edition provides the student-friendly presentation and robust examples and problem sets for which Dennis Zill is known. This outstanding revision incorporates all of the exceptional learning tools that have made Zill's texts a resounding success. He carefully blends the theory and application of important concepts while offering modern applications and problem-solving skills. The Black Sea presently faces severe ecological disequilibrium due primarily to eutrophication and other types of contaminants, from atmospheric, river and landbased sources. Major contaminants include nutrients, pesticides, hydrocarbons and heavy metals. Among the most critical contemporary concerns are eutrophication and associated deterioration of water quality, plankton blooms, hypoxia and anoxia, loss of biodiversity and decline of living resources. A better understanding of conditions leading to eutrophication and of the associated changes during the last four decades, is being carried out at national , regional and international levels. High quality scientific research has been conducted in all Black Sea riparian countries (Bulgaria, Georgia, Romania, Russian Federation, Turkey, Ukraine). In addition, several successful regional research programmes (e.g., CoMSBlack, NATO-TU Black Sea, NATO-TU Waves, EC-EROS 2000 Phase III, IOC Black Sea Regional Center with Pilot Projects 112) and one major environmental management program (GEF-BSEP) have been successfully launched. New international efforts like the Black Sea Commission, the Black Sea Program Coordination Unit, the Black Sea Economic Cooperation (all situated in Istanbul), together with the Convention for the Protection of the Black Sea against Pollution (Bucharest, 1992) and the Odessa Interministerial Declaration (1993) attest to the economic and political importance of these problems and the attention presently paid to this endangered sea.
