The book presents a wide range of innovative research ideas and current trends in stereo vision. The topics covered in this book encapsulate research trends from fundamental theoretical aspects of robust stereo correspondence estimation to the establishment of novel and robust algorithms as well as applications in a wide range of disciplines. Particularly interesting theoretical trends presented in this book involve the exploitation of the evolutionary approach, wavelets and multiwavelet theories, Markov random fields and fuzzy sets in addressing the correspondence estimation problem. Novel algorithms utilizing inspiration from biological systems (such as the silicon retina imager and fish eye) and nature (through the exploitation of the refractive index of liquids) make this book an interesting compilation of current research ideas.

acceptable scientific foundation for the submission of expert opinion in a wide variety of cases, especially in products liability cases. The answer usually lies in the outcomes of past cases as well as objective scientific literature. But how do we relate past decisions to biotechnology, bioinformatics, in-silico biology, genome mapping, and other new scientific developments? And just how valid are peer-reviewed studies when they are performed in house or funded by companies with a stake in the product? *Science and Litigation: Products Liability in Theory and Practice* addresses these and many other questions involving the relationship between the physical and biological sciences and the civil justice system. First, it reviews scientific legal theory by highlighting landmark cases, analyzing the scientific peer-review process, and examining the relationship between scientific causal theory and legal causation rules. Then the book addresses the practical issues involved in prosecuting or defending the science-based case, from pretrial discovery to choosing an expert witness. Products liability litigation can be a long and arduous task for everyone involved. This practical guide makes it a little easier. Taking you from research to courtroom, *Science and Litigation: Products Liability in Theory and Practice* provides information about the admissibility of scientific ideas and leads both expert witness and attorney through the necessary steps to be successful in litigation. This book reports on the state of the art in physical ergonomics and addresses the design of products, processes, services, and work systems to ensure they are productive, safe, and enjoyable for people to use. The human body's responses to physical and physiological work demands, strain injuries from repetition, vibration, force, and posture are the most common types of issues examined, along with their design implications. The book explores a wide range of topics in physical ergonomics, including the consequences of repetitive motion, materials handling, workplace safety, the usability of portable devices, design, working postures, and the work environment. Mastering physical ergonomics and safety engineering concepts is fundamental to creating products and systems that people can safely and conveniently use, as well as avoiding stresses and minimizing the risk of accidents. Based on the AHFE 2019 Conference on Physical Ergonomics and Human Factors, held on July 24-28, 2019, in Washington D.C., USA, this book provides

readers with a comprehensive perspective on the current challenges in physical ergonomics, which is a critical aspect in the design of any human-centered technological system, and for factors influencing human performance.

What Pisses Me Off About The Good Ol' USA is a topical review of current affairs and national issues that represents the views of most Americans. This book represents those Americans who do not have the ability to speak out or who are afraid to speak out due to political correctness. This book dives into many issues that have destroyed the fabric of our society that our fore fathers fought so hard to provide for future generations under the US Constitution and the Bill Of Rights. The title reflects what is wrong with our society and country and tells it in a straight-forward manner. Brian Curtis discusses issues affecting our national security, our financial well-being, our moral and ethical compass, our faith, our misguided political behavior, equality, unlawful behavior, and lastly our inability to reduce the size of government that has turned our country into a nanny state and a co-dependent country. This title reflects years of frustration over the inability of our countrymen to rise up and put a stop to political correctness forever. This book reveals the frustrations, the bold-face lies and deceit, and the weakness of our countrymen to stand up and correct the direction this country is heading. This topical

In 1956 John Osborne's *Look Back in Anger* changed the course of English theatre. 'Look Back in Anger presents post-war youth as it really is. To have done this at all would be a significant achievement; to have done it in a first play is a minor miracle. All the qualities are there, qualities one had despaired of ever seeing on stage - the drift towards anarchy, the instinctive leftishness, the automatic rejection of "official" attitudes, the surrealist sense of humour . . . the casual promiscuity, the sense of lacking a crusade worth fighting for and, underlying all these, the determination that no one who dies shall go unmourned.' Kenneth Tynan, *Observer*, 13 May 1956 'Look Back in Anger . . . has its inarguable importance as the beginning of a revolution in the British theatre, and as the central and most immediately influential expression of the mood of its time, the mood of the "angry young man".'
