Within the Frame is a book about finding and expressing your photographic vision, specifically where people, places, and cultures are concerned. A personal book full of real-world wisdom and incredible images, author David duChemin (of pixelatedimage.com) shows you both the how and the why of finding, chasing, and expressing your vision with a camera to your eye. Vision leads to passion, and passion is a cornerstone of great photography. With it, photographs draw the eye in and create an emotional experience. Without it, a photograph is often not worth—and can't capture—a viewer's attention. Both instructional and inspirational, Within the Frame helps you on your photographic journey to make better images of the places and people you love, whether they are around the world or in your own backyard. duChemin covers how to tell stories, and the technology and tools we have at our disposal in order to tell those narratives. Most importantly, he stresses the crucial theme of vision when it comes to photographing people, places, and cultures—and he helps you cultivate and find your own vision, and then fit it within the frame.

As humans, we are drawn to predators like no other group of animals. They are the epitome of form and function, and have a level of perfection that we revere. In 2009, wildlife expert, conservationist and photographer David Plummer was diagnosed with Parkinson's disease. Rather than let it defeat him, he was galvanised to grab life by the horns and achieve the perfect wildlife shot. Over the next seven years, he did much more than that. The result is this breathtaking collection of over 200 of his best and favourite photographs of exotic and wild animals in their natural habitats. To capture them, David travelled to some of the most remote and stunning locations across the world, from Africa to India to the Galápagos Islands and back to his native England. 7 Years of Camera Shake showcases seven years of immersive and illuminating photography: of predators on the prowl, of prey in the clutches of death, of the inexplicable synchronisation of nature, of the beautiful relationship between mother and child, and much, much more. Plummer's work has been featured in wildlife publications and national and international press, and now the work he has produced since his diagnosis is showcased here, accompanied by his thoughts and anecdotes on how he achieved each perfect shot.

War and memories of war; both are products of soldiers. The memories I wish to share with you are things that happened to someone at some space in time and impacted on the memories of many. Soldier's memories have always been the remembrance of wars. I think for that reason, soldiers tend to have selective memories. Soldiers also have a tendency that over the years, they lie a lot. Are the lies really lies, or is it the fact that as the years pass, they soften the horrors? Soldiers speak only in bits and pieces. Scraps of reality of things we did so long ago. Memories pasted together with a bond that graciously escapes those fortunate enough to never have been there. Yet those memories return to torment not only us, but also those around us that love us so. I do not wish to defend the innermost corners of my mind or the minds of others. I will only attempt to place the amalgamation of events that lie there into words as they form in my mind. These actions that happened so long ago, still smolders there in all of us. The facts ever so little softened or changed, take the place of reality. The mind selects the parts that seem important and magnifies them. As the grandiose stories begin to take shape, undisturbed sleep slowly returns to those who have learned to live with their lies. Why waste a thousand words? Photos tell stories. And the more you can do with your digital camera, the better the story you can tell. So build a remote control and sneak up on that picture that keeps eluding you. Create an adapter that lets you use SLR-type lenses on your point-and-shoot. Play with lens magnification or create a pinhole lens. Beef up flash memory. And that's just where the tale begins. The ending is up to you. Hack any digital camera Illustrated step-by-step directions for more than 20 hacks, including: Building triggers Accessing raw sensor data Making accessory lens adapters Eliminating the infrared blocking filter Extending lenses Making reverse macro adapters Building a monopod Creating bicycle and car mounts Hacking microdrives from other devices
