(NbS) that improve ecosystem functions of environments and landscapes affected by agricultural practices and land degradation, while enhancing livelihoods and other social and cultural functions. This has opened up a portfolio of NbS options that offer a pragmatic way forward for simultaneously addressing conservation, climate and socioeconomic objectives while maintaining healthy and productive agricultural systems. NbS can mimic natural processes and build on land restoration and operational water-land management concepts that aim to simultaneously improve vegetation and water availability and quality, and raise agricultural productivity. NbS can involve conserving or rehabilitating natural ecosystems and/or the enhancement or the creation of natural processes in modified or artificial ecosystems. In agricultural landscapes, NbS can be applied for soil health, soil moisture, carbon mitigation (through soil and forestry), downstream water quality protections, biodiversity benefits as well as agricultural production and supply chains to achieve net-zero environmental impacts while achieving food and water security, and meet climate goals.

This text uses the theory of the firm to integrate and link economic theory (microeconomics and macroeconomics), decision sciences (mathematical economics and econometrics), and the functional areas of business (accounting, finance, marketing, personnel or human resource management, and production) and shows how all of these topics are crucial components of managerial decision making. The text is divided into five parts-Part I examines the nature and scope of managerial economics, Part II analyses demand, Part III presents the theory and measurement. It covers the full range of optimization techniques used in managerial decision making. The book offers extensive end-chapter material in the form of the summary, discussion questions, problems, chapter appendixes along with appendix problems, supplementary readings, and Internet site addresses. This seventh edition includes new sections, new case studies, some of which are India based, and five new longer Indian integrated case studies. In addition, the existing case studies, supplementary readings, and Internet site addresses have been revised.

"A truly excellent book that explains where our pandemic response went wrong, and how we can understand those failings using the tools of economics." —Tyler Cowen, Holbert L. Harris Chair of Economics at George Mason University and coauthor of the blog Marginal Revolution Have you ever stopped to wonder why hand sanitizer was missing from your pharmacy for months after the COVID-19 pandemic hit? Why some employers and employees were arguing over workers being re-hired during the first COVID-19 lockdown? Why passenger airlines were able to get their own ring-fenced bailout from Congress? Economics in One Virus answers all these pandemic-related questions and many more, drawing on the dramatic events of 2020 to bring to life some of the most important principles of economic thought. Packed with supporting data and the best new academic evidence, those uninitiated in economics will be given a crash-course in the subject through the applied case-study of the COVID-19 pandemic, to help explain everything from why the U.S. was underprepared for the pandemic to how economists go about valuing the lives saved from lockdowns. After digesting this highly readable, fast-paced, and provocative virus-themed economic tour, readers will be able to make much better sense of the events that they've lived through. Perhaps more importantly, the insights on everything from the role of the price mechanism to trade and specialization will grant even those wholly new to economics the skills to think like an economist in their own lives and when evaluating the choices of their political leaders.
