Many of the initial developments towards the Internet of Things have focused on the combination of Auto-ID and networked infrastructures in business-to-business logistics and product lifecycle applications. However, the Internet of Things is more than a business tool for managing business processes more efficiently and more effectively – it will also enable a more convenient way of life. Since the term Internet of Things first came to attention when the Auto-ID Center launched their initial vision for the EPC network for automatically identifying and tracing the flow of goods within supply-chains, increasing numbers of researchers and practitioners have further developed this vision. The authors in this book provide a research perspective on current and future developments in the Internet of Things. The different chapters cover a broad range of topics from system design aspects and core architectural approaches to end-user participation, business perspectives and applications.

This college-level media management textbook reflects the changes in the media industries that have occurred in the past decade. Today's managers must address new issues that their predecessors never faced, from the threats of professional piracy and casual copying of digital media products, to global networks, on-demand consumption, and changing business models. The book explains the new new vocabulary of media moguls, such as bandwidth, digital rights management, customer relations management, distributed work groups, centralized broadcast operations, automated playlists, server-based playout, repurposing, mobisodes, TV-to-DVD, and content management. The chapters logically unfold the ways that managers are evolving their practices to make content, market it, and deliver it to consumers in a competitive, global digital marketplace. In addition to media companies, this book covers management processes that extend to all content-producing organizations, because today's students are as likely to produce high-quality video and Web video for ABC Computer Sales as they are for the ABC Entertainment Television Network.

The book has been fully updated to address challenges brought on by sea changes such as globalization, recession, technology, and the aftereffects of the terror attacks. It features new sections on identifying and assessing competencies and future needs; management vs. technical succession planning; and ethics and conduct; and new chapters on integrating recruitment and retention strategies with succession planning programs. This edition incorporates the results of two extensive new surveys, and includes a Quick Start guide to help begin immediate implementation as well as a CD-ROM packed with assessments, checklists, customizable guides, and other practical tools. The Cloud Computing Bible is a complete reference to cloud computing that presents the technologies, protocols, platforms and infrastructure that make cloud computing possible and desirable. Many of the cloud computing books on the market today are small books of 300 pages or less and the larger books tend to be programming books or security titles. A longer format book such as Cloud Computing Bible allows a complete definition of the topic as well as in-depth introductions to essential technologies and platforms. Additionally it allows significant technologies to be presented in a form that provides enough detail for the reader to determine if it is something that they are interested in learning more about. It is important to stress platform and technologies as the main subject and intersperse that with products in order to provide an extended life span, but have current appeal. The book will be divided into five parts: The Value Proposition, Platforms, Infrastructure, Services and Applications, and The Mobile Cloud.

Aimed at software developers, this book proposes the creation of a new profession of software design. The examples in the text are updated to reflect new platforms along with additional case studies where appropriate.

The Institute of Food Technologists (IFT) recently endorsed the use of computers in food science education. The minimum standards for degrees in food science, as suggested by IFT,"require the students to use computers in the solution of problems, the collection and analysis of data, the control processes, in addition to word processing."Because they are widely used in business, allow statistical and graphical of experimental data, and can mimic laboratory experimentation, spreadsheets provide an ideal tool for learning the important features of computers and programming. In addition, they are ideally suited for food science students, who usually do not have an extensive mathematical background. Drawing from the many courses he has taught at UC Davis, Dr. Singh covers the general basics of spreadsheets using examples specific to food science. He includes more than 50 solved problems drawn from key areas of food science, namely food microbiology, food chemistry, sensory evaluation, statistical quality control, and food engineering. Each problem is presented with the required equations and detailed steps necessary for programming the spreadsheet. Helpful hints in using the spreadsheets are also provided throughout the text. Key Features * The first book to integrate speadsheets in teaching food science and technology * Includes more than 50 solved examples of spreadsheet use in food science and engineering * Presents a step-by-step introduction to spreadsheet use * Provides a food composition database on a computer disk

Design-oriented firms such as Apple and IDEO have demonstrated how design thinking can affect business results. However, most managers lack a sense of how to use this new approach for issues other than product development and sales growth. Solving Problems with Design Thinking details ten real-world examples of managers who successfully applied design methods at 3M, Toyota, IBM, Intuit, and SAP; entrepreneurial start-ups such as MeYou Health; and government and social sector organizations, including the City of Dublin and Denmark's The Good Kitchen. Using design skills such as ethnography, visualization, storytelling, and experimentation, these managers produced innovative solutions to such problems as implementing strategy, supporting a sales force, redesigning internal processes, feeding the elderly, and engaging citizens. They elaborate on the challenges they faced and the processes and tools they used, providing a clear path to implementation based on the principles and practices laid out in Jeanne Liedtka and Tim Ogilvie's Designing for Growth: A Design Thinking Tool Kit for Managers.
